Summary

Second-year Computer Science student with a strong interest in emerging technology, AI, and solving real-world problems. Eager to use my range of skills to build full-stack and AI-powered applications, while continuing to develop by learning new frameworks and building products.

Education

The University of New South Wales (UNSW) Sydney, NSW

Bachelor of Computer Science *2025 – 2028 (Expected)*

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Design & Programming, Software Engineering Fundamentals, Database Systems, Artificial Intelligence, Machine Learning & Data Mining

Projects

Origin Story™ | *Next.js, React, Tailwind CSS, Postgres, Claude API, Vercel* Aug 2026 – Present

- Lead developer for a live coaching platform used by 20 clients and staff, rebuilding and extending the founder's prototype with Next.js App Router and Supabase, adding a video curriculum and new tools
- Integrated the Claude API behind a server-side route to provide AI script reviews and idea coaching, with zod-validated structured output and per-user LLM usage tracking
- Designed a Postgres schema across 70 versioned SQL migrations, using Supabase Auth and row-level security to separate client, CSM and admin access; deployed on Vercel with auto-deploys from Git

Uni Management System | *React Native, Expo, TypeScript, TanStack Query, Vitest* Sep 2026 – Present

- Built an offline-first mobile and web app (on GitHub) to track subtopic mastery per subject and week on a four-level scale, with bulk import of pasted course outlines
- Parsed myUNSW iCal timetable feeds (recurrence rules, timezones) with local storage and JSON backup, and covered edge cases like Flexibility Week and daylight saving with Vitest unit tests
- Adapted an open-source Claude Code learning workflow to a personal Obsidian course wiki, adding custom skills for note ingestion and exam tracking, plus a Python linter that flags broken wikilinks, missing images and frontmatter errors

Signal – AI Security Scanner | *Next.js, Three.js, Express, MySQL, Qdrant* Mar 2026

- Built a repo security scanner (leaked secrets, injection flaws, misconfigurations) in a team of 4 at the FoundersHack 2026 hackathon; co-designed the architecture and features and supported teammates across the backend and VS Code extension
- Developed the interactive 3D attack-chain graph (Three.js, Next.js) that visualises how linked findings combine into exploitable paths, built on the team's recursive SQL CTE attack-chain detection
- Implemented compliance scoring modelled on SOC 2, OWASP and GDPR with PDF export, alongside the team's OpenAI-powered fix suggestions and Qdrant vector layer that suppresses near-duplicate false positives

Experience

Tutor Jan 2025 – Present

Pre-Uni College *Sydney, NSW*

- Taught 20–30 students a week across Years 1–6 in maths, thinking skills, reading and writing, adapting explanations to each student's learning style
- Ran practice selective tests with one-on-one reviews, giving targeted feedback and practice questions to prepare students for the selective test and school assessments
- Communicated regularly with parents and students to track progress and set learning goals

Technical Skills

Languages: TypeScript, JavaScript, Java, C, Python, SQL (Postgres, MySQL), HTML/CSS
Frameworks: Next.js, React, React Native, Expo, Node.js, Express, Tailwind CSS
Developer Tools: Git, Vercel, Supabase, VS Code, Claude Code, Qdrant, Vitest
Libraries: TanStack Query, Better Auth, Three.js, ical.js, pandas, NumPy, Matplotlib
